

Test Case Number	Purpose of Test Case	Input Data	Expected Output
1	Test to determine validity of date by first testing a year that does not fall within the specified parameters	1/1/1860	In this case, the expected output would be false since 1860 is a year less than 1900
2	Test to determine validity of date by first testing a year that does not fall within the specified parameters	1/1/2022	In this case, the expected output would be false since 2022 is a year greater than 2021
3	Test to determine validity of date by testing a month that is not valid	13/1/2021	In this case, the expected output would be false since 13 is a month number that exceeds 12
4	Test to determine validity of date by testing a month that is not valid	0/1/2021	In this case, the expected output would be false since 0 is a month number that falls below 1
5	Test to determine validity of date by testing a day within a given month	1/33/2021	In this case, the expected output would be false since 33 is a number above 31 which is the maximum number of days January has
6	Test to determine validity of date by testing a day within a given month	4/30/2021	In this case, the expected output would be false since although 30 is not above the maximum number of days April has(which is 30), it is a date in the

			future.
7	Test to determine validity of date by testing a day in a leap year	2/29/2020	In this case, the expected output would be true since 2020 is a leap year and therefore, 29 is a valid date.
8	Test to determine validity of date by testing a day in the last month of the year	12/1/2005	Expected output would be true since this is a valid date.
9	Test to determine validity of date by testing a day in the first month of the year	1/31/2020	Expected output would be true since this is a valid date and the day does not cross January's threshold of 31 days.
10	Test to determine validity of date by testing a future date beyond current date	3/29/2021	Expected output would be false since this is a date that is in the future.
11	Test to determine validity of current date which is dynamic	Current Day's Date	Expected output would be true since the current date would always be valid.
